

Supplemental Table S4-B. Summary of $^{206}\text{Pb}/^{238}\text{U}$ zircon crystallization dates. Each data point represents an analysis of a single spot; error bars in rank-order plots are 1σ errors for single U-Pb analyses. The black horizontal line and colored box represent the calculated weighted mean date and 2σ uncertainty, respectively. MSWD—mean square weighted deviates; n = #/#—number of grains of total number analyzed used in calculation.

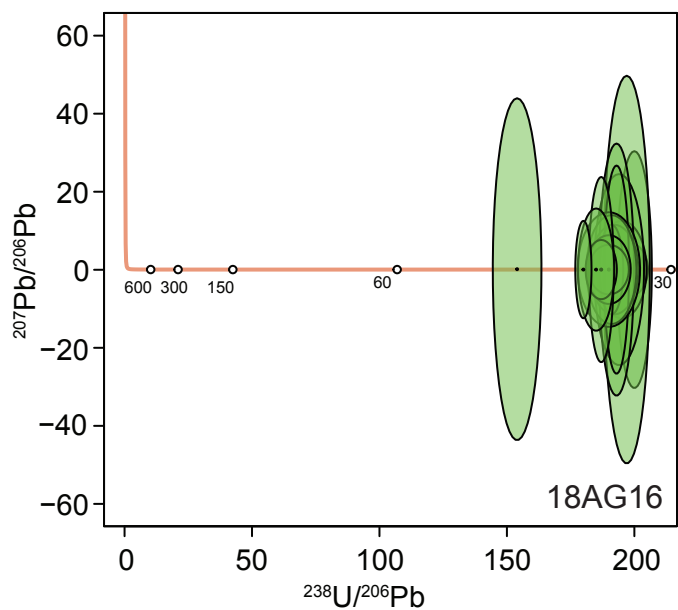

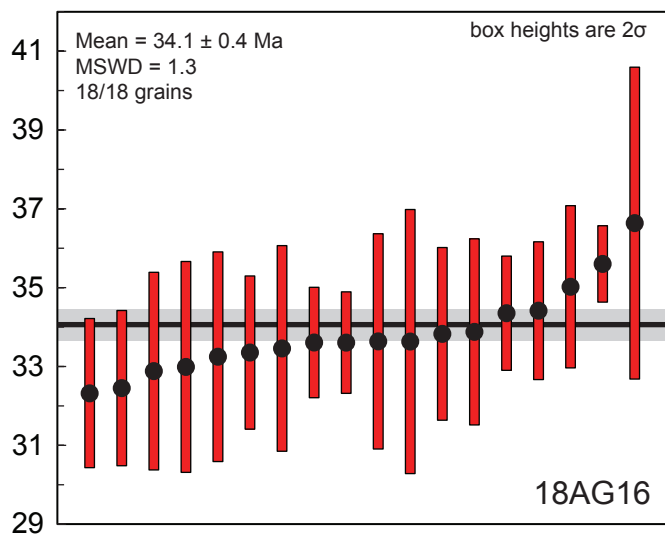

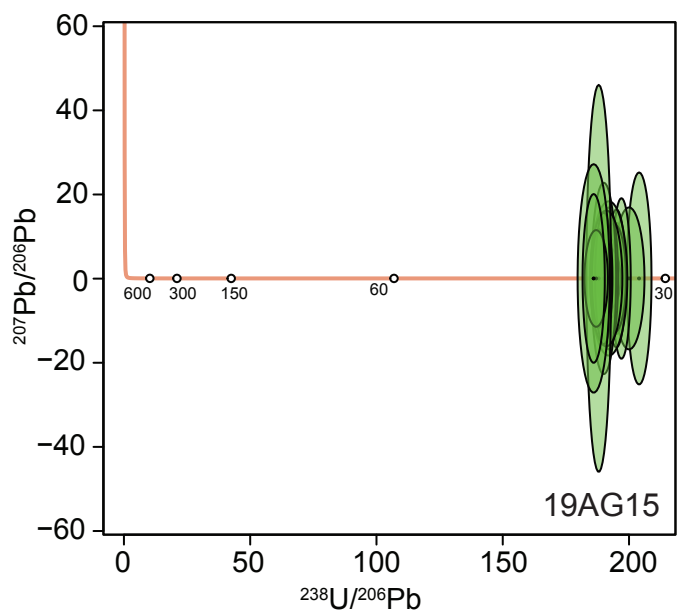

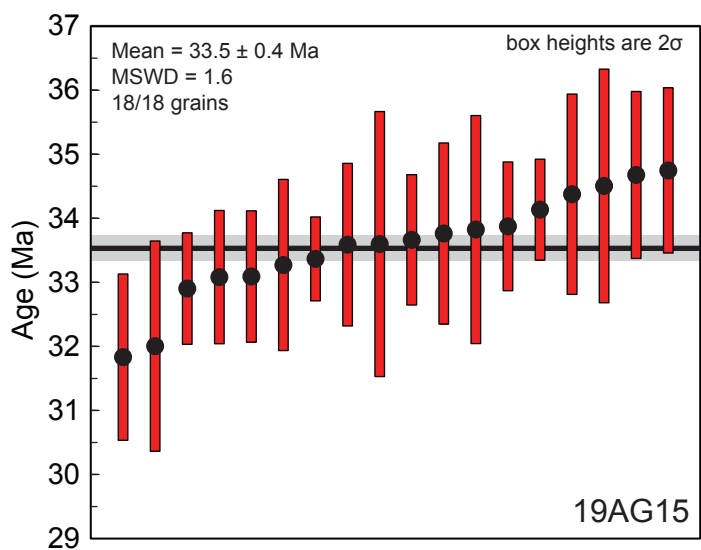

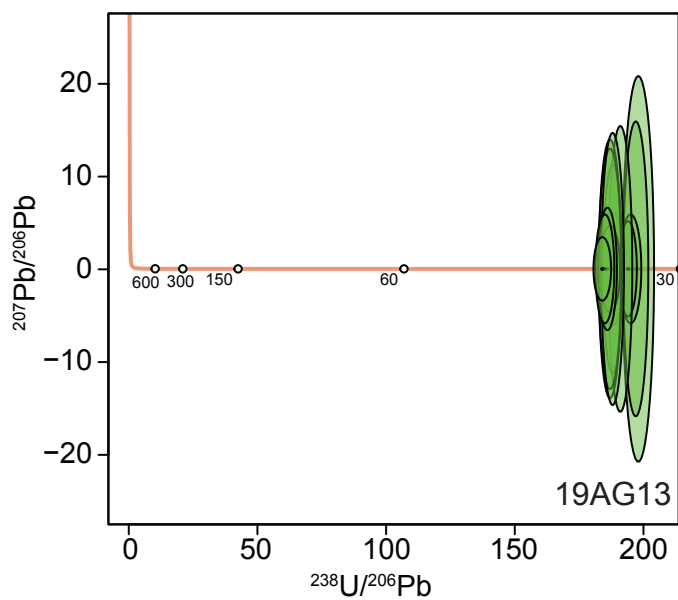

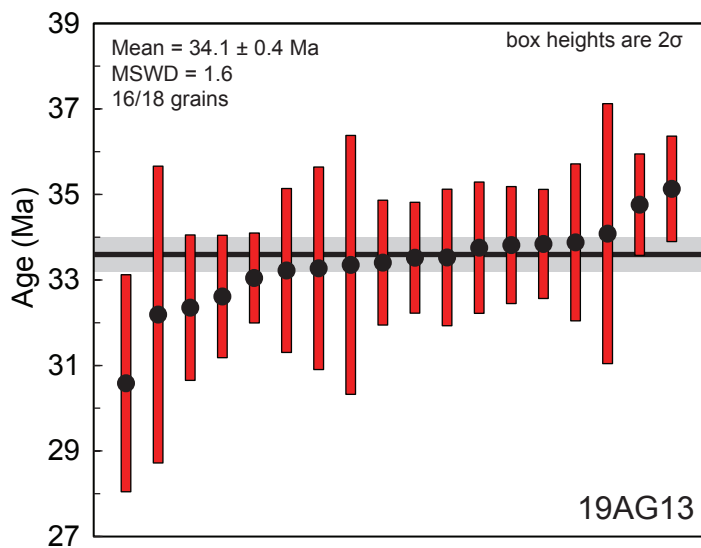

Table S4-B2
