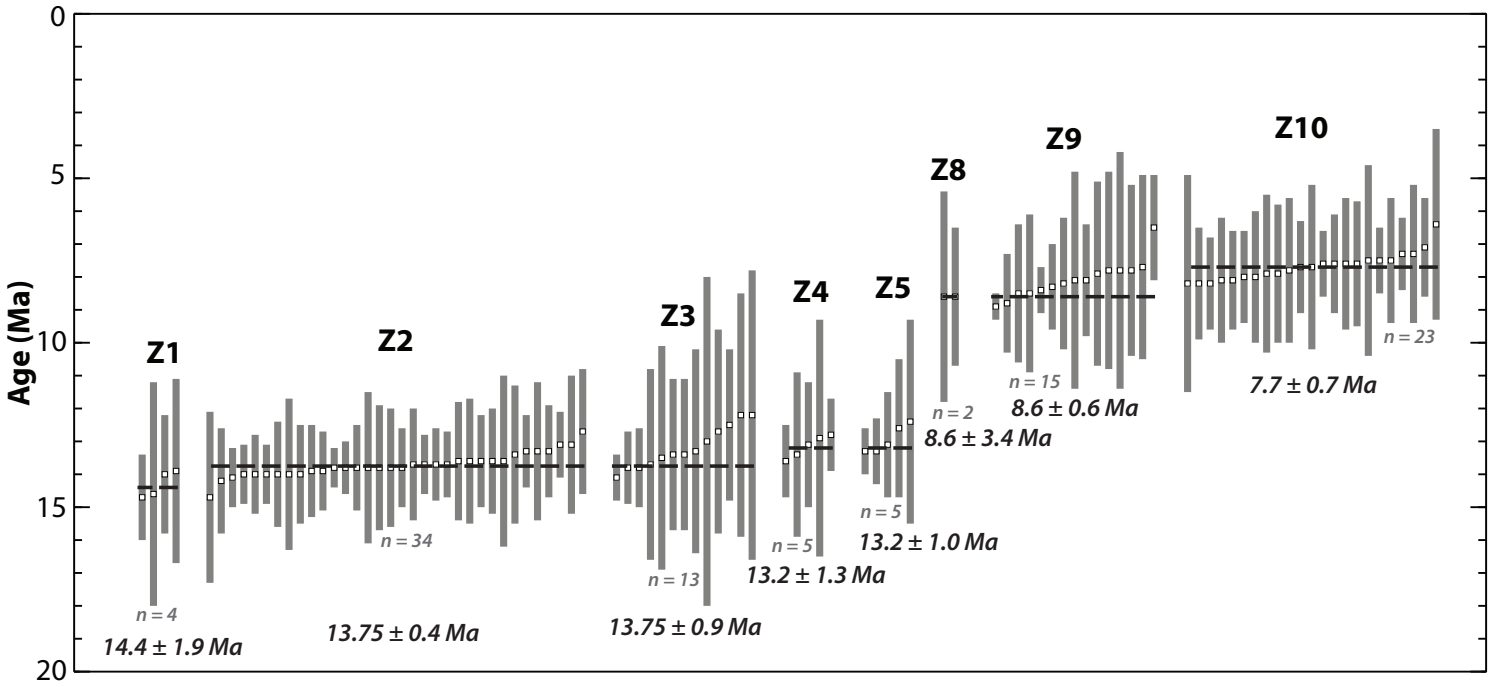
Supplemental Fig. 1
Anderson et al.



Supplemental Figure 1. Plot of the youngest U-Pb age populations for eight samples of the Neiva Basin (from lowest to highest, samples Z1, Z2, Z3, Z4, Z5, Z8, Z9, and Z10), showing individual U-Pb ages (white squares) and associated age errors (vertical gray bars). The weighted mean ages (black text and horizontal dashed bars) for the youngest populations within each sample show a systematic upsection decrease in age, consistent with contributions from syndepositional volcanic sources.
