\$ - Total Fe as FeO determined from INAA analyses.

Notes for Tables 1 to 4:

Sample locations shown on Figure 2 in paper. Major elements, volatiles, Rb and Sr for all samples except EV-GU analyzed at SERGOMIN in Santiago, Chile. See Nasi and others (1985) for techniques. Major elements for EV-GU done by electron microprobe analyses of fused glass at Cornell University. Trace element analyses determined by Instrumental Neutron Activation Analyses (INAA) at Ward Laboratory, Cornell University. Analytical techniques and standard values for Cornell analyses discussed by Kay et al. (1987). Na rather than Fe was used as internal flux monitor for concentration levels of elements determined by INAA (see discussion in Kay et al. 1987). FeO^* (total Fe as FeO) as determined by INAA is shown for comparison.
