Right dihedral solution for the
350 striation measures with sense
determined - All of Malawi.

Supplementary data 92, for: Oblique extensional tectonics in the Malawi Rift, Africa

Christopher C. Sorlien, May 8, 1992 and July 27, 1992

The data used in "Oblique extensional tectonics in the Malawi Rift, Africa" follows. Measurements were made in March 1985 and analyzed manually that year using the right dihedral method of Angelier and Mechler (1977). The data were reanalyzed using the same method and a computer program in 1990 and 1991. The computed results are slightly different than the previous results for several reasons. The data analyzed by hand were weighted by confidence of the measurement, while all measurements for which sense was determined were weighted equally in the computed solution. Stations with many measurements were broken into two parts in the hand analysis by location within a station, while they were combined in the computed solution. The computed results were compared with the hand analysis; when computed results were somewhat ambiguous the quality of the individual measurements was taken into account in choosing the extension direction for figure 2.

The following measurements were made by Pierre-Yves Chenet and Luc Meffre of the Institut Francaise du Pétrole, and Jean Chorowicz and Sorlien. Measurements are often rounded to the nearest 5° before correction for magnetic deviation, which is valid since fault surfaces are not perfectly planar; however, these measurements should not be analyzed assuming more precision than 3 degrees. Measurements were made with the compass set on zero and then the magnetic deviation was added in later. The following measurements are corrected for magnetic deviation. Measurements are in this order: strike, dip direction, dip, pitch direction, pitch, and sense. r=reverse; n=normal; d=dextral; s=sinistral. If the striations are questionable I will add p=(?) or p=?. If they were particularly good and that was noted, then I will add p=!. No comment generally means that the striations are not questionable but are not spectacular either. The confidence of the sense determination is given in the following order from bad to good where noted. s=?; (?); app. (for apparent); prob (for probably); and sure or clear. For each station with more than 3 measurements, I will give my own qualitative judgement of the quality of the right dihedral solution from poor to excellent. This is not related to the confidence of individual measurements.

The stations were located onto geologic maps in the field, and latitude and longitude was later measured from these 1:100,000 and 1:250,000 scale maps; precision in most cases is 100 to a couple hundred meters. Most locations are on or near dirt or paved roads. Malawi is a tropical country with thick residual soils; there were almost no outcrops over a wide area of north central Malawi. A future study may want to concentrate on where

streams cross faults, and use a boat along the coast of Lake Malawi. Water erosion may keep up with weathering along escarpments.

Stations a and b-not used in figure 2, only 2 measurements each station.

 176,"e",83,"n",60,"r" s=sure
 156,"e",80,"n",85,"n" p=(?), s=prob
 146,"sw",24,"se",62 no sense, azimuth striation converted to pitch assuming normal (not used in inversion).

station 16, no inversion since only 2 measures

101,"s",80,"w",10,"s" s=sure
 31,"nw",84,"s",52,"n" p=(?), s=sure

station 17, no inversion since only 2 measures

80,"n",85,"e",45,"s" p=!, s=prob
 37,"se",54,"sw",70,"n" s=sure

station 18, fair to good since extension not tightly constrained

01,"w",65,"n",30,"n" s=sure by 2 cm separation

16,"w",58,"s",60,"n" s=sure
 16,"w",55,"ne",90,"n" s=sure
 161,"w",62,"n",5,"d" s=sure
 166,"e",90,"s",40,"d" s=sure

The following measure at first did not have sense determined, and then we went back to it and it was s=prob normal dextral. I missed this notation, and did not use this measurement in the inversion, but it could be used. It is compatible with NW extension, but does not constrain the solution further.

166,"w",75,"n",36,"d" s=prob

station 19, inversion quality fair-good since many slip directions are subparallel and therefore do not tightly constrain the extension direction

107,"s",50,"e",25,"s"
 87,"s",60,"e",35,"s"

Station 1; $15^{\circ} 20.69' S$, $35^{\circ} 14.28' E$ along dirt road.
 Station 2; $15^{\circ} 57.36' S$, $34^{\circ} 54.32' E$ in bend of main paved road.
 Station 3; $15^{\circ} 6.47' S$, $35^{\circ} 22.46' E$ single measure on dirt road.
 Station 4; $15^{\circ} 2.76' S$, $35^{\circ} 24.41' E$ on road at low but distinct Makongwa scarp
 Station 5a; $15^{\circ} 10.60' S$; $35^{\circ} 17.40' E$ big roadcut near Kasupe, main road
 Station 5b; $15^{\circ} 10.52' S$; $35^{\circ} 19.26' E$ main road
 Station 6; $14^{\circ} 26.07' S$, $35^{\circ} 21.49' E$ on road measuring up and SE from fault.
 Station 7; $14^{\circ} 25.59' S$; $34^{\circ} 33' E$ where paved road crosses distinct scarp
 Station 8a measures 1 and 2; $14^{\circ} 42.83' S$, $34^{\circ} 47.06' E$ odometer=121.4 km
 Station 8b measure 3; $14^{\circ} 44.99' S$, $34^{\circ} 47.84' E$ -8a and 8b both where streams cut distinct low scarp west of paved road. odometer=126-"T" intersection at Bilila=136.0
 Station 9; $13^{\circ} 13.27' S$, $34^{\circ} 18.46' E$, measures are close to base of distinct west facing scarp where main road crosses it (road cut)- more measures could be made further away from base of scarp.
 Station 10; $12^{\circ} 58.24' S$, $34^{\circ} 13.05' E$ on dirt road about 300 m SE of pond
 Station 11; $12^{\circ} 57.01' S$, $34^{\circ} 16.08' E$ same dirt road as 10.
 Station 12; $15^{\circ} 57.88' S$, $34^{\circ} 54.07' E$ on main road- starts 1.3 km south of station 2 and proceeds 1.4 km further south along road.
 Station 13; $16^{\circ} 1.99' S$, $34^{\circ} 51.34' E$ - on main road, starts at base of escarpment about 50 m above a barrier in road- proceeds a few hundred m uphill (to N).
 Station 14; $16^{\circ} 18.47' S$, $35^{\circ} 3.84' E$ -Chakanza-Muono Fault-in open area north of dirt road.
 Station 15; $16^{\circ} 5.90' S$, $34^{\circ} 39.91' E$, measures 1-10 on small outcrop along road just before base of Mwanza scarp, 11-19 in stream bed a few m above where road crosses stream near the base of the scarp.
 Station 16; $15^{\circ} 52.67' S$, $34^{\circ} 24.02' E$ - measure 1 up a stream, measure 2 on cut of dirt road.
 Station 17; $15^{\circ} 37.59' S$, $34^{\circ} 34.29' E$ -hard rock outcrop on main(dirt) road 5 km east of Mwanza.
 Station 18; $15^{\circ} 2.84' S$, $34^{\circ} 48.48' E$ - in stream at Sikulamowa Fault just south of road.
 Station 19; $14^{\circ} 52.08' S$, $34^{\circ} 44.54' E$, on main road 16.5 km east of Ntcheu Mobil station-roadcut with especially clear striations.
 Station 20; $14^{\circ} 47.30' S$, $34^{\circ} 35.64' E$ roadcut on main road.
 Stations 21 and 22-single measures on Lillongwe-Salima road-by odometer
 Station 21 is at 744.5 or 6.5 km east of Mvera; 746.6 is railroad, 758.9 is Chitala Road, 760.7 is railroad, Station 22 is at a scarp at 763.2 km, 772.5 is a main intersection-Salima-Lillongwe Nkhotakhota.

Station 23; 13° 25.09' S, 34° 15.0' E, odometer=819.2 km=46.7 km north of intersection-good striations on roadcut-other roadcuts available to north, but no mapped faults here.

Station 24; 11° 46.12' S, 34° 11.93' E-at 205.4 km, Chinteché at 198.0, river at 205.9-at small quarry-quartzite-this is the middle of a large area of deep weathering-few outcrops and no striations in this region

Station 25; 11° 36.55' S, 34° 18.25' E, measures 1-5 about 500 m south of Nkhata Bay on dirt road, measures 6-18 reached by boat about 1 km to the south-quartzite outcrop.

Station 26; 11° 01.73' S, 33° 54.30' E, roadcut east of bridge on N side river.

Station 27; did not have a copy of the map on which we originally located stations 27, 28, and 34, and the new paved road is not on the geologic map. Station 27=10° 43' S, 34° 9' E roadcut on main new road 7.8 km above the Chiweta intersection.

Station 28; 10° 32.2' S, 34° 12.5' E- roadcut 8.7 km north of intersection with Livingstonia Road.

Station 29; 10° 35.66' S, 34° 08.57' E, location in middle of switchbacks on escarpment- measured from switchback 1 (top) through switchback 11

Station 30; measure 1 on coast 10° 25.80' S, 34° 15.37' E. Measure 2 is in a quarry about 1 km to SE.

Station 31; 4 locations along dirt road measure 1 and 2, odometer=960.3 km, bridge=960.7, measures 3-12=961.7 km, 13-15=962.4 km, narrowest point in valley = 963.1, measure 16=963.5 Zaninge grocery=964.0, bridge=965.5

1,2=9° 57.21' S, 33° 47.83' E; 3-12=9° 56.55' S, 33° 47.41' E; 13-15=9° 56.08' S, 33° 47.24' E; 16=9° 55.84' S, 33° 46.78' E

Station 32; 9° 54.84' S, 33° 41.12' E, at high point in road and 983.0 km

Station 33; 9° 43.89' S, 33° 53.11' E, road to Tanzania, measures 1-3 at 063.1 km, measures 4-12 at 64.5 km (lat-long)(heading SW), Kaporo intersection and 90° bend in road at 067.8 km, immigration control at 070.8 km

Station 34 is at several outcrops along 6 km of new road along the South Rukuru river-travelling to south:

Measures 1-3 at 223.7 km; 4-5 at 224.8; bridge over river at 225.1; 6-11 at 227.3; 12-14 at 229.5 km, intersection Muhuju-Karonga-Mzuzu at 244.0

Station 35; 1-3 at 11° 0.88' S, 33° 59.65' E; 4 and 5 in stream at 11° 0.35' S, 34° 01.75' E.-along dirt road to Mpompa

Station 36; 12° 28.43' S, 33° 31.44' E, about 1 km south of intersection with Mabulabo Road on the main paved road- at a roadcut of weathered rock at base of escarpment.
