Note: 2 σ errors are calculated by error propagation. Decay constants: $\lambda^{230}\text{Th} = 9.1954 \times 10^{-10} \pm 7.19 \times 10^{-10}$; $\lambda^{234}\text{U} = 2.8349 \times 10^{-10} \pm 5.7 \times 10^{-9}$; $\lambda^{238}\text{U} = 1.55125 \times 10^{-10} \pm 1.66 \times 10^{-13}$.

*Sample sites: 1. Spring/Starburst Chamber, Victoria Fossil Cave (VFC); 2. Grant Hall, VFC; 3. Great Hall, VFC; 4. New Formation Chamber/Straw Haven, VFC; 5. Fossil Chamber, VFC; 6. Main Chamber, Cathedral Cave; 7. Fox Cave; 8. Wombat Cave.

[†] Sample not included in Figure 2 because of overlapping 2 σ age errors with neighboring subsample.

[§] Alpha-counting data from Ayliffe and Veech (1988); only those sample with 2 σ errors < ±20 k.y. are shown here.
