Note: Analyses are by external detector method using 0.5 for the $4\pi/2\pi$ geometry correction factor; Zircon ages calculated using dosimeter with $\zeta_{CN2} = 137 \pm 2.14$; Apatite ages are calculated using dosimeter glass CN5 with $\zeta_{CN5} = 361 \pm 6$.

*Dosimeter track densities (pd) are ($\times 10^6$ tr cm $^{-2}$); other track densities (ps & pi) are ($\times 10^7$ tr cm $^{-2}$), except apatite where (ps) are ($\times 10^5$ tr cm of tracks counted (N) shown in brackets.

†MCTL = mean confined track length.

§N. D. = No data.

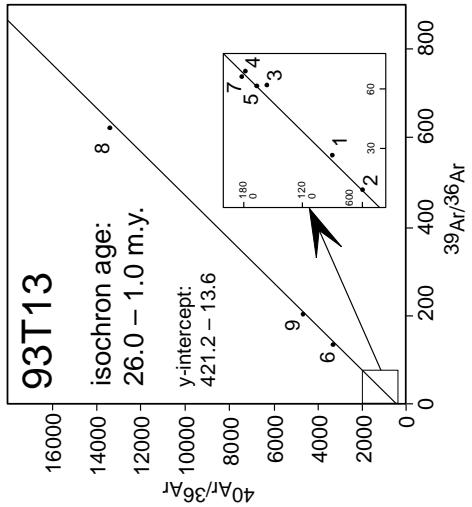

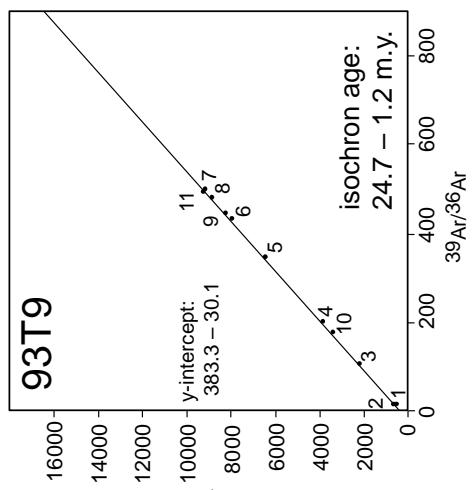

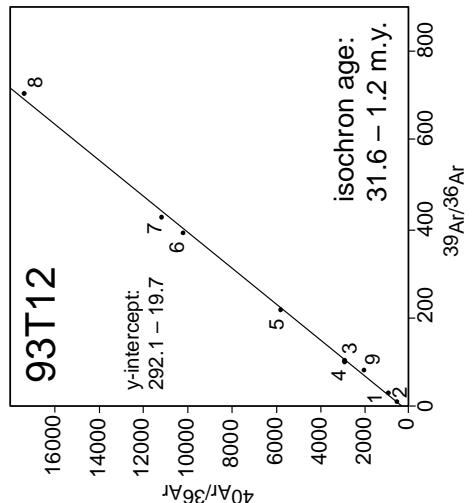

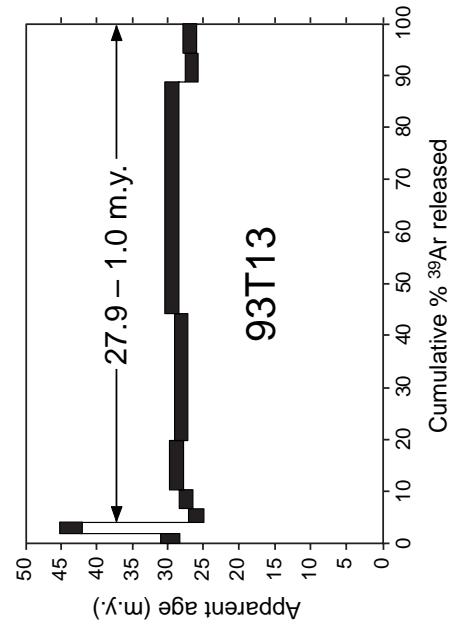

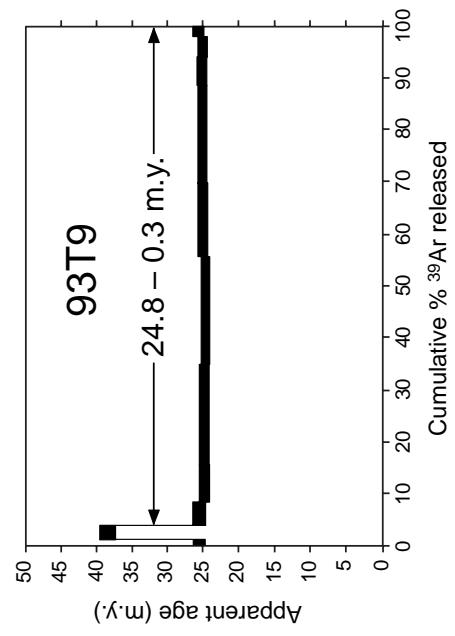

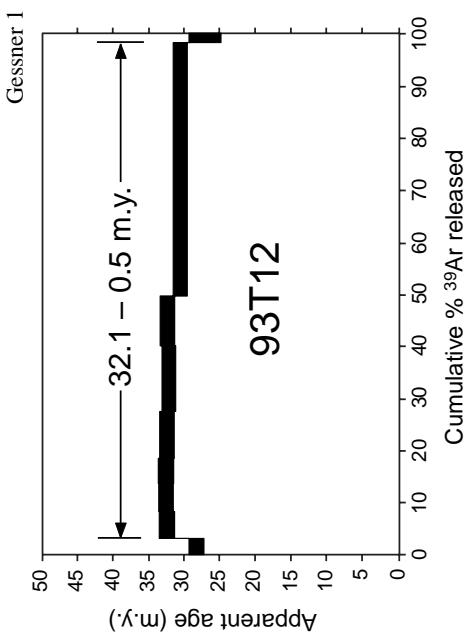

#N. A. = Not applicable.

*radiogenic argon.

†errors are 1σ values.§ ^{37}Ar below detection limit.

Appendix Figure 1: White mica release spectra and isochron correlation diagrams from analyzed samples. Release steps used for calculation of plateau ages are indicated by arrows. Plateau ages are calculated after Dalrymple and Lanphere (1974). Sequence of heating steps is indicated by numbers in isotope correlation diagrams.

Dalrymple G.B., and Lanphere M.A., 1974, $^{40}\text{Ar}/^{39}\text{Ar}$ age spectra of some undisturbed terrestrial samples: *Geochimica et Cosmochimica Acta*, v. 38, p. 716–738.
