Supplemental Text S1: Whole Rock Major- and Trace-Element Geochemistry

Whole rock major- and trace-element geochemistry was determined for 15 samples. Four samples were analyzed by Activation Laboratories Ltd. in Ontario, Canada. Representative portions from each sample underwent lithium metaborate/tetraborate fusion, followed by digestion with a weak nitric acid. Major-elements were measured using inductively coupled plasma optical emission spectrometry and the trace-elements were measured using ICP-MS. Eleven samples were analyzed at Pomona College following the procedure from Lackey et al. (2012). Representative portions of each sample were powdered and mixed at a 1:2 ratio with dilithium tetraborate (3.5 g powder with 7.0 g dilithium tetraborate). The mixture was fused into a glass bead in a graphite crucible, reground, and then fused a second time. The glass beads were subsequently polished. Major elements were analyzed using a 3.0 kW Panalytical Axios wavelength-dispersive XRF spectrometer, and trace elements were analyzed using an Agilent 8900 triple quadrupole ICP-MS with a ESI NWR 193 nm laser ablation system. Concentrations were determined using reference calibration curves calculated from 55 reference materials.

Supplemental Text S2: Chemical Analyses of Rutile

For rutile analyses, Zr $\text{l}\alpha$ was acquired on three spectrometers simultaneously (1 PETJ crystal and 2 PETL crystals) for a total of 106 seconds on-peak and 192 seconds off-peak. The intensities were aggregated using Probe for EPMA software (Probe Software, Inc; Donovan et al., 2012). Ti $\text{k}\alpha$ was acquired on PETL for 8 s on peak and 8 s off peak. A linear background fit was utilized for Ti $\text{k}\alpha$, and exponential background fits were utilized for Zr $\text{l}\alpha$ (Donovan et al., 2011). Measurements of Nb, Fe, and Cr were performed on a few randomly-selected grains. Low concentrations of <1200 ppm for Nb, <900 ppm for Fe, and <700 ppm for Cr were concluded to not significantly influence the rutile and were therefore, not measured (Zach et al., 2004).
